

Project Design Phase

Solution Architecture

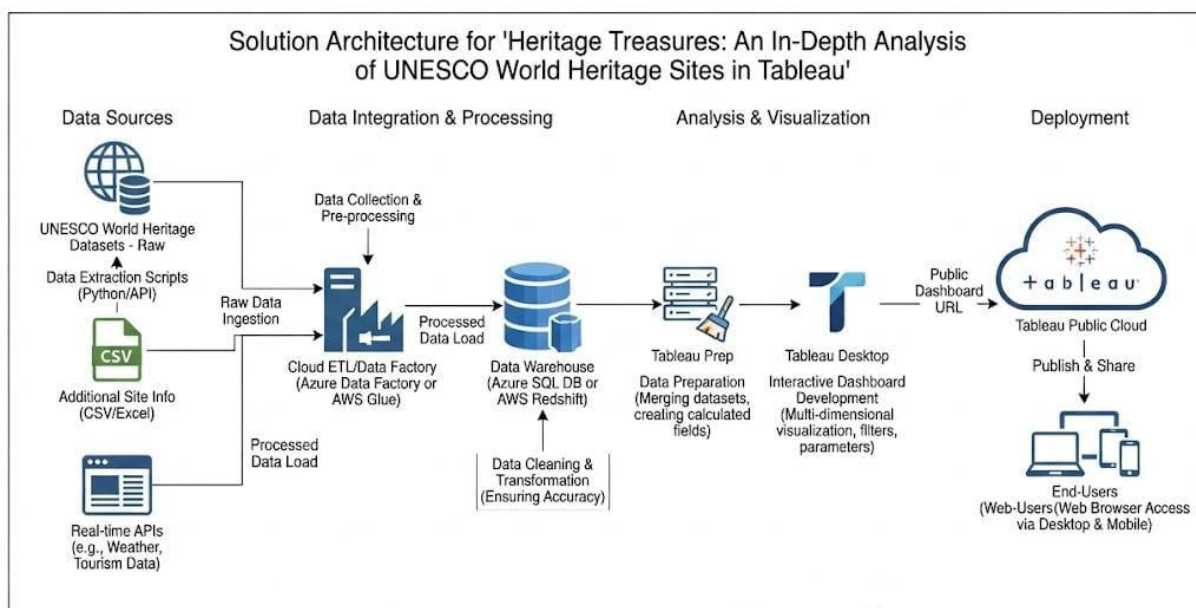

Date	1 July 2026
Team ID	
Project Name	Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Solution Architecture Diagram:

“The solution architecture for Heritage Treasures consists of an end-to-end data pipeline. Raw UNESCO datasets are collected and pre-processed using data cleaning tools to ensure accuracy. The processed data is then integrated into Tableau, where interactive dashboards are developed to provide multi-dimensional visualization. Finally, the dashboard is published to Tableau Public, allowing end-users to access and explore heritage site data seamlessly through any web browser.”
