

Project Development Phase

Data Preprocessing and Analysis

1. Data Preprocessing Steps

To ensure the accuracy and reliability of the "Heritage Treasures" project, the following data cleaning steps were performed in Tableau:

- **Data Loading:** The raw UNESCO dataset (whc-sites-2019.csv) was imported into the Tableau environment.
- **Handling Missing Values:** Rows containing null values in critical fields were identified and excluded to prevent skewed analysis.
- **Data Type Adjustment:** Field types were verified and adjusted (e.g., ensuring geographical data was correctly mapped as 'Geographic Role' and dates were formatted as 'Date' types).
- **Field Renaming:** Column headers were renamed for better readability and consistency across all visualizations.

2. Business Questions and Visualizations

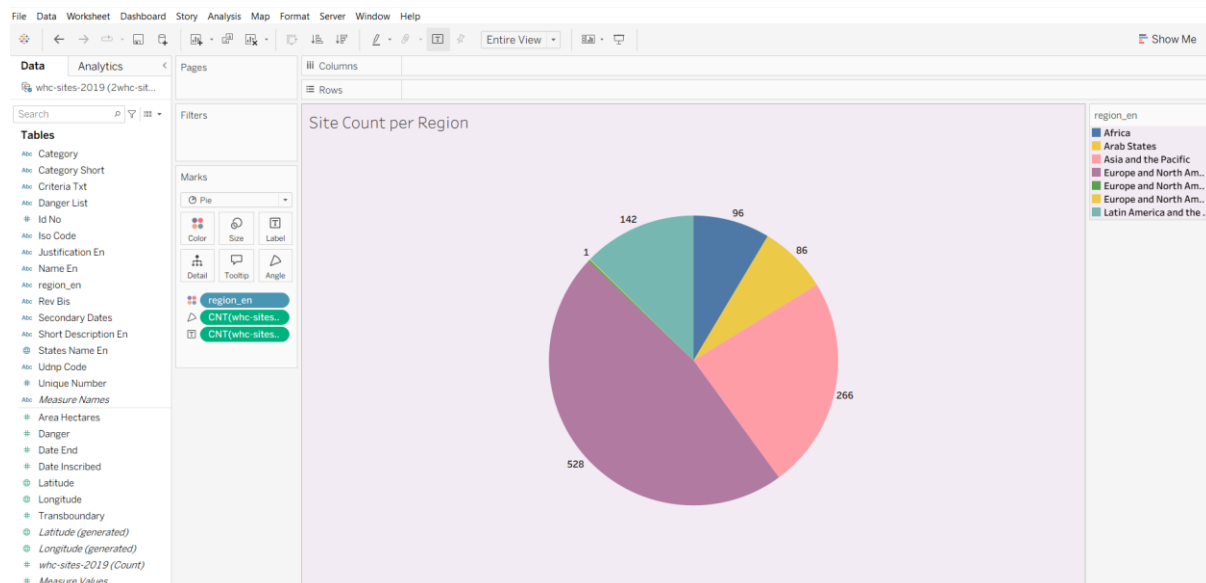

Question 1: Which regions hold the highest number of UNESCO World Heritage sites?

- **Visualization:** A bar chart displaying the count of heritage sites aggregated by region.

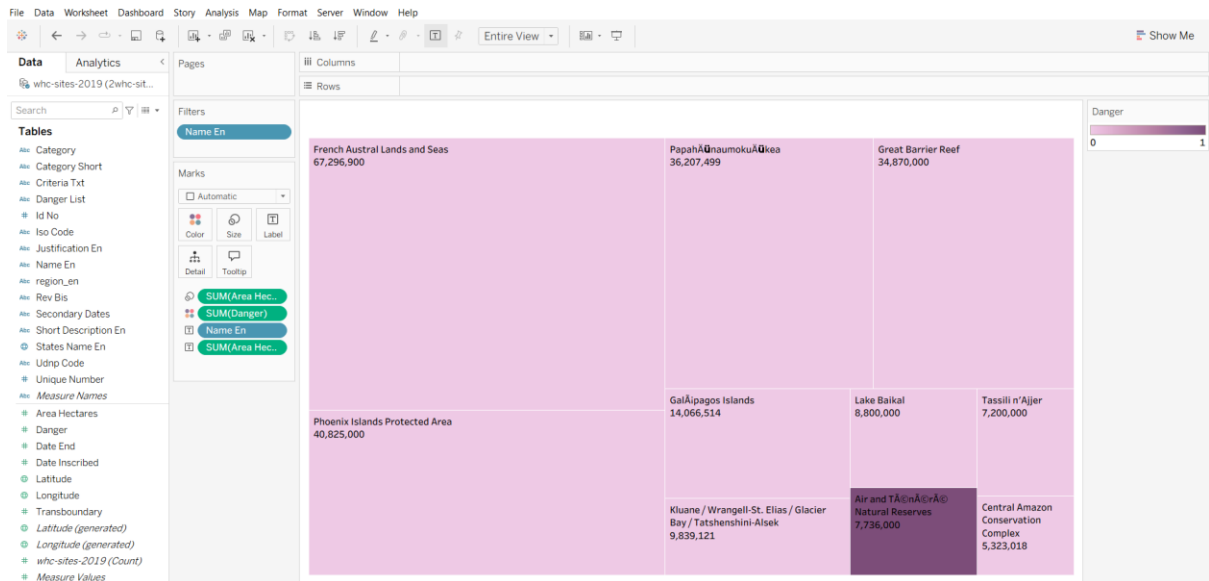

Question 2: What is the distribution of site categories (Cultural, Natural, or Mixed) across the globe?

- Visualization: A pie chart showing the percentage breakdown of site categories.

Question 3: Which sites are currently identified as being at risk or prone to danger?

- Visualization: A treemap visualization highlighting sites with high "Danger" ratings.

Question 4: How has the inscription of new heritage sites changed over the decades?

- Visualization: A line chart showing the trend of "Date Inscribed" on the X-axis and the "Count of Sites" on the Y-axis.
